

Early Warning Indicator Search Engine

PRINCIPAL'S Exchange has designed an innovative system for monitoring K-12 student progress toward **College and Career Readiness, including five of the eight California Local Control Accountability Plan (LCAP) indicators**. Schools find it daunting to follow large numbers of individual students and to provide each student with differentiated and timely support with academic and related targets. *eWise* is a key part of a complete inquiry-based system that provides an effective, efficient and *doable* way to strategically focus finite resources and maximize student success. *eWise* fulfills the need for a user-friendly interface for counselors, administrators and school teams to monitor student progress on research-based early warning indicators, based on local criteria. It facilitates meaningful data reflections and team action planning tailored to individual student needs by clustering students with similar profiles for targeted responses.

The *eWise* user-friendly front-end resides on the district's server and displays all data in an easy-to-read panel. It accesses the information in real-time with no need to upload or export data files to another database or table. On and off screen queries can be displayed and easily sorted by indicator or subgroup. This system displays: student assessment results, course enrollment, grades, attendance, tardies, discipline (referrals and suspensions), and school affiliations, according to "cut points" that are locally determined. English learner progress, retention, and 3rd grade reading scores will be available in February 2015.

Summary data are available from *eWise* and provide the tools necessary for system-wide formative feedback and continuous improvement at all levels of the organization. Teams can examine patterns and distinguish systemic from isolated issues. PRINCIPAL'S Exchange provides companion processes, protocols, templates and intervention strategies, to guide discussions and
